

Republic of the Philippines  
Province of Samar  
**MUNICIPALITY OF CALBIGA**

**Office of the Local Project Monitoring Committee (LPMC)**

**POST ACTIVITY REPORT**

Activity Title : **ORIENTATION FOR THE ROAD AND BRIDGES  
INFORMATION SYSTEM (RBIS)**

Date : June 28-July 2, 2026

Venue : The Tropics Hotel and Resorts, Brgy. Baras, Palo, Leyte

Number of  
Participants : Four (4) LPMC Members

---

**I- Objectives of the Activity:**

The orientation and training on the Roads and Bridges Information System (RBIS) and its companion Local Roads and Bridges Inventory (LRBI) aim to train local government focal persons to collect, manage, and monitor accurate digital infrastructure data for better local planning and transparent governance.

Particularly it aims also to guide participants on the following;

1. Improve data quality by ensuring comprehensive, updated, and accurate digital inventories of local road and bridge networks;
2. Standardize collection using the official platform and condition survey tools to track real-time infrastructure progress;
3. Centralize storage in a unified web database to streamline reporting between local and national agencies;
4. Enable data-driven decisions so local and national policymakers can accurately prioritize repair, maintenance, and new construction projects;
5. Identify resource gaps by pinpointing exact locations that require technical or financial assistance; and
6. Promote transparency and accountability in local road asset management while aligning local plans with national socioeconomic goals.

**II- Highlights of the Activity:**

At the start of the five-day activity, the participants were guided on the System Introduction, which centered on explaining RBIS as a web-based database tool created to store local road and bridge profiles in a centralized location.

After such, the next discussion was on *full integration goals with local government engineering departments* to improve data accuracy and governance. This topic guided participants on Policy Alignment, highlighting the inclusion of the Local Roads and Bridges Inventory (LRBI) as a key designated statistic for national socio-economic planning.

Successive discussions were on Data Management and Mapping- which includes the following;

1. Inventory Data Input: Demonstrating how to record main road records, bridge attributes, traffic data, and kilometer posts.
2. Geographic Information System (GIS): Training on local road network mapping, spatial referencing, and pinpointing asset locations.
3. Infrastructure Attributes: Reviewing safety elements, side features, and drainage data entry procedure.

The concluding parts of the discussions was under Validation and Reporting-highlighting the following topics, such as;

1. Condition Assessments: Reviewing visual surveys used to rate pavement and bridge distress conditions.
2. User Roles and Task boards: Detailing workflow responsibilities for data collectors, encoders, reviewers, and system supervisors.
3. Report Generation: Showing how to create statistical summaries, inventory lists, and road profile reports.

### III- **Issues and Concerns:**

Issues and concerns that crop-up during the evaluation is that almost all municipalities have *no permanently employed Geo-Tagger* were mostly designated are job order employees who cannot be send for training due to their employment status. Other issues were the *absence of appropriate instrument/equipment for geo-tagging* hence, municipalities cannot procure for reason of insufficiency of funds for such purpose.

### IV- **Agreement:**

Each group of participants from different participating municipalities were made to formulate their respective *Action Plans* serving as guide in the conduct of their respective Roll-Out at municipal level.

### V- **Recommendation:**

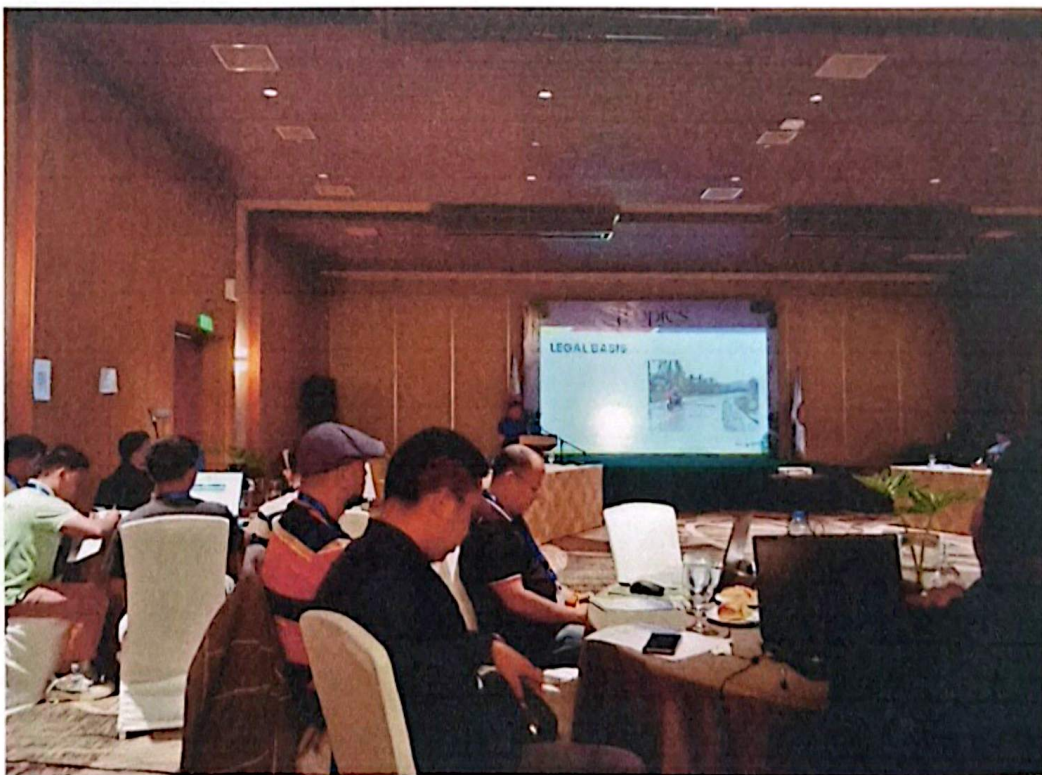

Each municipality through the LCE, to issue an Executive Order designating a permanent municipal employee as Geo-Tagger preferably an IT capable of using GPS-enabled mobile applications, cameras or specialized geo-tagging tools.
